

**Syllabus for  
Bachelor of Science in Mathematics (Honours)  
Under Choice Based Credit System**

**Academic Session:  
w.e.f. 2020-2023**

*for*  
**All Constituent / Affiliated Colleges Under  
Binod Bihari Mahto Koyalanchal University,  
Dhanbad**

**UG :MATHEMATICS**

**CBCS SYLLABUS**

**B.B.M.KU DHANBAD**

**Members of Board of Studies of CBCS Under – Graduate Syllabus as per guidelines of the Binod Bihari Mahato Koyalanchal University , Dhanbad.**

**1. Chairperson :-**

**Dr. R.K. Tiwary**

Associate Professor & Head

University Department of Mathematics

Binod Bihari Mahato Koyalanchal University, Dhanbad

**2. Member:-**

**Dr. Shiv Prasad**

Assistant Professor

University Department of Mathematics

Binod Bihari Mahato Koyalanchal University, Dhanbad

**3. Member:-**

**Dr. T.P. Choubey**

Associate Professor

Head, Department of Mathematics , Chas College Chas.

**4. Member:-**

**Dr. Nasim Ahmad**

Assistant Professor

Head, Department of Mathematics , PKRM College, Dhanbad

**5. Special Invitee: Dr. B.K. Singh (Rtd.)**

Associate Professor

Head, Department of Mathamtics ,B.S.City College, Bokaro.

  
(DR. R.K. TIWARY)  
H.O.D.

**H.O.D.**

**P.G. Department of Mathematics  
B.B.M.K.U. Dhanbad**

	<b>MATHS-H-DSE-604A-T/ MATHS-H-DSE-604B-T/ MATHS-H-DSE-604C-T</b> (06 Credits, 60 Lectures & 15 Tutorials) (Choice to choose any one paper)		100	80	20
	<b>Total Marks</b>		<b>2400</b>	<b>1920</b>	<b>480</b>

**Note:**

**Symbol of Paper: MATHS-H-C-101-T.** The first five symbols in Roman capital letters indicate the subject, the next symbol H or G indicate Honours or General course; the next symbol(s) denotes Core (C), Generic Elective (GE), Discipline Specific Elective (DSE), AECC, SEC, etc. Out of the next three digits, the first digit indicates the semester e.g. 1,2,3,4,5,6 for semester I, II, III, IV, V, VI respectively, and the next two digits indicate paper number. The last letter T or P indicates Theory or Practical.

**Table: Course structure for B.Sc. / B.A. / B.Com. (Hons. Programme)**

Semester	Honours (Core Courses) 14 Papers	Allied (Elective Courses) 8 Papers	Ability Enhancement (Compulsory Courses) Total 4 Papers	Credits
Sem-I	C-1, C-2 (6+6=12 Credits)	GE-1 (06 Credits)	Eng Comm./ MIL/ MIL+NH (02 Credits)	20 Credits
Sem-II	C-3, C-4 (6+6=12 Credits)	GE-2 (06 Credits)	EVS (02 Credits)	20 Credits
Sem-III	C-5, C-6, C-7 (6+6+6=18 Credits)	GE-3 (06 Credits)	SEC-1 (02 Credits)	26 Credits
Sem-IV	C-8, C-9, C-10 (6+6+6=18 Credits)	GE-4 (06 Credits)	SEC-2 (02 Credits)	26 Credits
Sem-V	C-11, C-12 (6+6=12 Credits)	DSE-1, DSE-2 (6+6=12 Credits)		24 Credits
Sem-VI	C-13, C-14 (6+6=12 Credits)	DSE-3, DSE-4 (6+6=12 Credits)		24 Credits

**Total = 140 Credits**

**MATHS-H-AECC-101-T**  
Language (English/Hindi/NH+MB)

<b>MAT-H-AECC-101-T</b>	Language (English / Hindi / NH+MB)	(02 Credits, 30 Lectures)
-------------------------	------------------------------------	---------------------------

**Full Marks: 10 (MSE: ½ Hrs) + 40 (ESE: 1 ½ Hrs) = 50**

**Pass Marks: (MSE: 4) + (ESE: 16) = 20**

A Common Syllabus Prescribed by BBMKU, Dhanbad

**Theory: 30 Lectures**

**Instruction to Question Setter for End Semester Examination (ESE):** There will be two groups of questions. Five Questions to be answered out of Nine Questions. Group A is compulsory and will contain two questions. Question No.1 (A) will be MCQ of 1 mark each (four questions). Question No.1 (B) will be short answer type to be answered in about 50 words of 2 marks (2 Questions). Group B will contain descriptive type eight questions of eight marks each, out of which any four are to answer. Each question carries 08 marks.

**SEMESTER - I**

<b>MATHS -H-C-101-T</b>	DIFFERENTIAL CALCULUS, INTEGRAL CALCULUS, ANALYTICAL GEOMETRY 2D & VECTOR CALCULUS	(06 Credits, 60 Lectures & 15 tutorial)
<b>MATHS -H-C-102-T</b>	HIGHER ALGEBRA & TRIGONOMETRY	(06 Credits, 60 Lectures & 15 tutorial)

**CORE COURSE - C.1:**

(Credits: Theory-05, Tutorial-01)

**Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100      Pass Marks (MSE: 8 + ESE: 32) = 40**

**Instruction to Question Setter for:**

**Mid Semester Examination (MSE):**

There will be two group of questions. **Group A is compulsory** and will contain five questions of **very short answer type** consisting of 1 mark each. **Group B will contain descriptive type** five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory** and will contain two questions. **Question No.1 will be very short answer type** consisting of eight questions of 1 mark each. **Question No.2 will be short answer type** consisting two question of 4 marks. **Group B will contain descriptive type** seven questions of sixteen marks each, out of which any four are to answer.

**Note:** There may be subdivisions in each question asked in End Semester Examinations.

## DIFFERENTIAL CALCULUS, INTEGRAL CALCULUS, ANALYTICAL GEOMETRY 2D & VECTOR CALCULUS:

### UNIT I

Hyperbolic functions, higher order derivatives, Leibniz rule and its applications to problems of type  $e^{ax+bsinx}$ ,  $e^{ax+bcosx}$ ,  $(ax+b)^n \sin x$ ,  $(ax+b)^n \cos x$ , concavity and inflection points, asymptotes, curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule. 15 Lectures (2 questions)

### UNIT II

Reduction formulae, derivations and illustrations of reduction formulae of the type  $\int \sin^n x dx$ ,  $\int \cos^n x dx$ ,  $\int \tan^n x dx$ ,  $\int \sin^n x \cos^m x dx$ ,  $\int \sin nx dx$ ,  $\int \cos nx dx$ ,  $\int (\log x)^n dx$ , parametric equations, parameterizing a curve, arc length, arc length of parametric curves, volume and area of surface of revolution. 15 Lectures (2 questions)

### UNIT III

Techniques of sketching conics, reflection properties of conics, rotation of axes and second degree equations, classification into conics using the discriminant, polar equations of conics. 15 Lectures (2 questions)

### UNIT IV

Triple product, introduction to vector functions, operations with vector-valued functions, limits and continuity of vector functions, differentiation and integration of vector functions, tangent and normal components of acceleration. 15 Lectures (2 questions)

### List of Practical (Using any software) for skill development.

1. Plotting of graphs of the functions  $e^{ax+b}$ ,  $\log(ax+b)$ ,  $\frac{1}{ax+b}$ ,  $\sin(ax+b)$ ,  $\cos(ax+b)$ ,  $|ax+b|$  and to illustrate the effect of  $a$  and  $b$  on the graph.
2. Sketching parametric graph.
3. Obtaining surface of revolution of a curve.
4. Tracing of conic in Cartesian/polar coordinate.
5. Sketching ellipsoid, hyperboloid, elliptic cone, paraboloid using Cartesian coordinate.
6. Matrix operations.

### Books Recommended

1. G.B. Thomas and R.L. Finney, *Calculus*, 9th Ed., Pearson Education, Delhi, 2005.
2. M.J. Strauss, G.L. Bradley and K. J. Smith, *Calculus*, 3rd Ed., Dorling Kindersley (India) P. Ltd. (Pearson Education), Delhi, 2007.
3. H. Anton, I. Bivens and S. Davis, *Calculus*, 7th Ed., John Wiley and Sons (Asia) P. Ltd., Singapore, 2002.
4. R. Courant and F. John, *Introduction to Calculus and Analysis* (Volumes I & II), Springer-Verlag, New York, Inc., 1989.

**CORE COURSE - C 2:**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100

Pass Marks (MSE: 8 + ESE: 32) = 40

**Instruction to Question Setter for:****Mid Semester Examination (MSE):**

There will be two group of questions. **Group A is compulsory** and will contain five questions of very short answer type consisting of 1 mark each. **Group B will contain descriptive type** five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory** and will contain two questions. **Question No.1 will be very short answer type** consisting of eight questions of 1 mark each. **Question No.2 will be short answer type** consisting two question of 4 marks. **Group B will contain descriptive type** seven questions of sixteen marks each, out of which any four are to answer.

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**HIGHER ALGEBRA & TRIGONOMETRY:****UNIT I**

Polar representation of complex numbers, nth roots of unity, De Moivre's theorem for rational indices and its applications, logarithmic of complex numbers.

15 Lectures (2 questions)

**UNIT II**

Equivalence relations, Functions, Composition of functions, Invertible functions, One to one correspondence and cardinality of a set, Well-ordering property of positive integers, Division algorithm, Divisibility and Euclidean algorithm, Congruence relation between integers, Principles of Mathematical Induction, statement of Fundamental Theorem of Arithmetic.

20 Lectures (3 questions)

**UNIT III**

Systems of linear equations, row reduction and echelon forms, vector equations, the matrix equation  $Ax=b$ , solution sets of linear systems, applications of linear systems, linear independence.

10 Lectures (1 questions)

**UNIT IV**

Introduction to linear transformations, matrix of a linear transformation, inverse of a matrix, characterizations of invertible matrices. Subspaces of  $R^n$ , dimension of subspaces of  $R^n$  and rank of a matrix, Eigen values, Eigen Vectors and Characteristic Equation of a matrix.

15 Lectures (2 questions)

**Books Recommended**

1. Titu Andreescu and Dorin Andrica, *Complex Numbers from A to Z*, Birkhauser, 2006.
2. Edgar G. Goodaire and Michael M. Parmenter, *Discrete Mathematics with Graph Theory*, 3rd Ed., Pearson Education (Singapore) P. Ltd., Indian Reprint, 2005.

3. David C. Lay, *Linear Algebra and its Applications*, 3rd Ed., Pearson Education Asia, Indian Reprint, 2007.

### SEMESTER-II

Total  $100 \times 3 + 50 \times 1 = 350$  Marks

MAT-H-AECC-202-T	ENVIRONMENT SCIENCE	(02 Credits, 30 Lectures)
------------------	---------------------	---------------------------

Full Marks:  $10$  (MSE:  $\frac{1}{2}$  Hrs) +  $40$  (ESE:  $1\frac{1}{2}$  Hrs) =  $50$     Pass Marks: (MSE:  $4$ ) + (ESE:  $16$ ) =  $20$   
A Common Syllabus Prescribed by BBMKU, Dhanbad

### SEMESTER-II

MATHS-C-203-T	REAL ANALYSIS – I	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-C-204-T	DIFFERENTIAL EQUATION	(06 Credits, 60 Lectures & 15 tutorial)

#### CORE COURSE - C 3:

(Credits: Theory-05, Tutorial-01)

Full Marks:  $20$  (MSE:  $1$ Hr) +  $80$  (ESE:  $3$ Hrs) =  $100$  Pass Marks (MSE:  $8$  + ESE:  $32$ ) =  $40$

*Instruction to Question Setter for:*

#### Mid Semester Examination (MSE):

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.*

#### End Semester Examination (ESE):

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

#### REAL ANALYSIS – I

##### UNIT I

Review of Algebraic and Order Properties of  $R$ ,  $\delta$ -neighborhood of a point in  $R$ , Idea of countable sets, uncountable sets and uncountability of  $R$ . Bounded above sets, Bounded below sets, Bounded Sets, Unbounded sets, Suprema and Infima, The Completeness Property of  $R$ , The Archimedean Property, Density of Rational (and Irrational) numbers in  $R$ , Intervals. Limit points of a set, Isolated points, Illustrations of Bolzano-Weierstrass theorem for sets.

25 Lectures (3 questions)

**UNIT II**

Sequences, Bounded sequence, Convergent sequence, Limit of a sequence. Limit Theorems, Monotone Sequences, Monotone Convergence Theorem. Subsequences, Divergence Criteria, Monotone Subsequence Theorem (statement only), Bolzano Weierstrass Theorem for Sequences. Cauchy sequence, Cauchy's Convergence Criterion.

10 Lectures (2 questions)

**UNIT III**

Infinite series, convergence and divergence of infinite series, Cauchy Criterion, Tests for convergence: Comparison test, Limit Comparison test, Ratio Test, Cauchy's nth root test, Raabe's test, DeMorgan's and Bertrand's test, Alternating series, Leibniz test, Absolute and Conditional convergence, Kummer's test, logarithmic ratio test.

25 Lectures (3 questions)

**Books Recommended**

1. R.G. Bartle and D. R. Sherbert, *Introduction to Real Analysis*, 3rd Ed., John Wiley and Sons (Asia) Pvt. Ltd., Singapore, 2002.
2. Gerald G. Bilodeau, Paul R. Thie, G.E. Keough, *An Introduction to Analysis*, 2nd Ed., Jones & Bartlett, 2010.
3. Brian S. Thomson, Andrew. M. Bruckner and Judith B. Bruckner, *Elementary Real Analysis*, Prentice Hall, 2001.
4. S.K. Berberian, *A First Course in Real Analysis*, Springer Verlag, New York, 1994

**CORE COURSE - C 4:**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: ½ Hrs) + 80 (ESE: 1½ Hrs) = 100, Pass Marks: (MSE: 8) + (ESE:32)=40
--

*Instruction to Question Setter for:***Mid Semester Examination (MSE):**

There will be two group of questions. **Group A is compulsory** and will contain five questions of **very short answer type** consisting of 1 mark each. **Group B will contain descriptive type** five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory** and will contain two questions. **Question No.1 will be very short answer type** consisting of eight questions of 1 mark each. **Question No.2 will be short answer type** consisting two question of 4 marks. **Group B will contain descriptive type** seven questions of sixteen marks each, out of which any four are to answer.

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**DIFFERENTIAL EQUATION:****UNIT I**

Differential equations and mathematical models. General, particular, explicit, implicit and singular solutions of a differential equation. Exact differential equations and integrating factors, separable equations and equations reducible to this form, linear equation and Bernoulli equations, special integrating factors and transformations.

15 Lectures (2 questions)

#### UNIT II

Introduction to compartmental model, exponential decay model, lake pollution model (case study of Lake Burley Griffin), drug assimilation into the blood (case of a single cold pill, case of a course of cold pills), exponential growth of population, limited growth of population, limited growth with harvesting.

15 Lectures (2 questions)

#### UNIT III

General solution of linear homogeneous equation of second order, principle of super position for homogeneous equation, Wronskian: its properties and applications, Linear homogeneous and Non-homogeneous equations of higher order with constant coefficients, Euler's equation, method of undetermined coefficients, method of variation of parameters.

15 Lectures (2 questions)

#### UNIT IV

Equilibrium points, Interpretation of the phase plane, predatory-prey model and its analysis, epidemic model of influenza and its analysis, battle model and its analysis.

15 Lectures (2 questions)

#### List of Practical (Using any software) for skill development

1. Plotting of second order solution family of differential equation.
2. Plotting of third order solution family of differential equation.
3. Growth model (exponential case only).
4. Decay model (exponential case only).
5. Lake pollution model (with constant/seasonal flow and pollution concentration).
6. Case of single cold pill and a course of cold pills.
7. Limited growth of population (with and without harvesting).
8. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
9. Epidemic model of influenza (basic epidemic model, contagious for life, disease with carriers).
10. Battle model (basic battle model, jungle warfare, long range weapons).
11. Plotting of recursive sequences.
12. Study the convergence of sequences through plotting.
13. Verify Bolzano-Weierstrass theorem through plotting of sequences and hence identify convergent subsequences from the plot.
14. Study the convergence/divergence of infinite series by plotting their sequences of partial

#### Books Recommended

1. Belinda Barnes and Glenn R. Fulford, *Mathematical Modeling with Case Studies, A*

*Differential Equation Approach using Maple and Matlab*, 2nd Ed., Taylor and Francis group, London and New York, 2009.

2. C.H. Edwards and D.E. Penny, *Differential Equations and Boundary Value problems Computing and Modeling*, Pearson Education India, 2005.
3. S.L. Ross, *Differential Equations*, 3rd Ed., John Wiley and Sons, India, 2004.
4. Martha L Abell, James P Braselton, *Differential Equations with MATHEMATICA*, 3rd Ed., Elsevier Academic Press, 2004.

### SEMESTER-III

#### I. SKILL ENHANCEMENT COURSE SEC 1:

(02 Credits: Theory: 30 Lectures)

Marks : 100 (ESE: 3Hrs) =100

Pass Marks Th ESE = 40

#### ELEMENTARY COMPUTER APPLICATION & SOFTWARES:

Theory: 30 Lectures

##### Objective of the Course

*The objective of the course is to generate qualified manpower in the area of Information Technology (IT) and Graphic designing which will enable such person to work seamlessly at any Offices, whether Govt. or Private or for future entrepreneurs in the field of IT.*

A Common Syllabus Prescribed by BBMKU, Dhanbad

Theory: 30 Lectures

##### *Instruction to Question Setter for*

*End Semester Examination (ESE): There will be objective type test consisting of hundred questions of 1 mark each. Students are required to mark their answer on OMR Sheet provided by the University.*

MATHS-C-305-T	THEORY OF REAL FUNCTIONS	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-C-306-T	GROUP THEORY I	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-C-307-T	Partial Differential Equation and Systems of Ordinary Differential Equation	(06 Credits, 60 Lectures & 15 tutorial)

#### CORE COURSE - C.5:

(Credits: Theory-05, Tutorial-01)

Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100      Pass Marks (MSE: 8 + ESE: 32) = 40

##### *Instruction to Question Setter for:*

##### Mid Semester Examination (MSE):

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.*

**End Semester Examination (ESE):**

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**THEORY OF REAL FUNCTIONS:**

**UNIT I**

Limits of functions ( $\varepsilon - \delta$  approach), sequential criterion for limits, divergence criteria. Limit theorems, one sided limits. Infinite limits and limits at infinity, Continuous functions, sequential criterion for continuity and discontinuity. Algebra of continuous functions. Continuous functions on an interval, intermediate value theorem, location of roots theorem. Uniform continuity, non-uniform continuity criteria, uniform continuity theorem.

22 Lectures (3 questions)

**UNIT II**

Differentiability of a function at a point and in an interval, Caratheodory's theorem, algebra of differentiable functions. Relative extrema, interior extremum theorem. Rolle's Theorem, Mean value theorem, intermediate value property of derivatives, Darboux's theorem. Applications of mean value theorem to inequalities and approximation of polynomials, Taylor's theorem to inequalities

23 Lectures (3 questions)

**UNIT III**

Cauchy's mean value theorem. Taylor's theorem with Lagrange's form of remainder, Taylor's theorem with Cauchy's form of remainder, application of Taylor's theorem to convex functions, relative extrema. Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions,  $\ln(1+x)$ ,  $1/ax+b$  and  $(1+x)^n$ .

15 Lectures (2 questions)

**Books Recommended:**

1. R. Bartle and D.R. Sherbert, *Introduction to Real Analysis*, John Wiley and Sons, 2003.
2. K.A. Ross, *Elementary Analysis: The Theory of Calculus*, Springer, 2004.

**CORE COURSE - C 6:**

(Credits: Theory-05, Tutorial-01)

Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100	Pass Marks (MSE: 8 + ESE: 32) = 40
---	------------------------------------

**Instruction to Question Setter for:****Mid Semester Examination (MSE):**

There will be two group of questions. **Group A is compulsory** and will contain five questions of **very short answer type** consisting of 1 mark each. **Group B will contain descriptive type** five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory** and will contain two questions. **Question No.1 will be very short answer type** consisting of eight questions of 1 mark each. **Question No.2 will be short answer type** consisting two question of 4 marks. **Group B will contain descriptive type** seven questions of sixteen marks each, out of which any four are to answer.

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**GROUP THEORY I:****UNIT I**

Symmetries of a square, dihedral groups, definition and examples of groups including permutation groups and quaternion groups (illustration through matrices), elementary properties of groups. 10 Lectures (1 questions)

Subgroups and examples and theorems on subgroups, normal subgroup, centralizer, normalizer, center of a group. 10 Lectures (2 questions)

**UNIT II**

Properties of cyclic groups, classification of subgroups of cyclic groups. Cycle notation for permutations, properties of permutations, even and odd permutations, alternating group. properties of cosets, Lagrange's theorem and consequences including Fermat's Little theorem. 15 Lectures (2 questions)

**UNIT III**

External direct product of a finite number of groups, normal subgroups, factor groups, Cauchy's theorem for finite abelian groups. 5 Lectures (1 questions)

Group homomorphisms, properties of homomorphisms, Cayley's theorem, properties of isomorphisms, First, Second and Third isomorphism theorems. 20 Lectures (2 questions)

**Books Recommended**

1. John B. Fraleigh, *A First Course in Abstract Algebra*, 7th Ed., Pearson, 2002.
2. M. Artin, *Abstract Algebra*, 2nd Ed., Pearson, 2011.
3. Joseph A. Gallian, *Contemporary Abstract Algebra*, 4th Ed., Narosa Publishing House, New Delhi, 1999.

4. Joseph J. Rotman, *An Introduction to the Theory of Groups*, 4th Ed., Springer Verlag, 1995.  
 5. I.N. Herstein, *Topics in Algebra*, Wiley Eastern Limited, India, 1975.

**CORE COURSE - C 7:**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100, Pass Marks (MSE: 8 + ESE: 32) = 40

*Instruction to Question Setter for:*

**Mid Semester Examination (MSE):**

There will be two group of questions. **Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.**

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.**

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**PARTIAL DIFFERENTIAL EQUATION AND SYSTEMS OF ORDINARY DIFFERENTIAL EQUATION:**

**UNIT I**

Partial Differential Equations – Basic concepts and Definitions, Mathematical Problems. First-Order Equations: Classification, Construction and Geometrical Interpretation. Method of Characteristics for obtaining General Solution of Quasi Linear Equations. Canonical Forms of First-order Linear Equations, Lagrange's equation, Method of Separation of Variables for solving first order partial differential equations.

15 Lectures (2 questions)

**UNIT II**

Introduction of Heat equation, Wave equation and Laplace equation. Classification of second order linear equations as hyperbolic, parabolic or elliptic. Reduction of second order Linear Equations to canonical forms.

15 Lectures (2 questions)

**UNIT III**

Nonlinear partial differential equation, standard forms I, II, III and IV, Charpit's method, Monge's method to solve equation of the form (i)  $Rr + Ss + Tt = V$  and (ii)  $Rr + Ss + Tt + U(rt = s^2) = V$

15 Lectures (2 questions)

**UNIT IV**

Systems of linear differential equations, types of linear systems, differential operators, an operator method for linear systems with constant coefficients, Basic Theory of linear systems in

normal form.

15 Lectures (2 questions)

**List of Practical (Using any software) for skill development**

1. Plotting of second order solution family of differential equation.
2. Plotting of third order solution family of differential equation.
3. Growth model (exponential case only).
4. Decay model (exponential case only).
5. Lake pollution model (with constant/seasonal flow and pollution concentration).
6. Case of single cold pill and a course of cold pills.
7. Limited growth of population (with and without harvesting).
8. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
9. Epidemic model of influenza (basic epidemic model, contagious for life, disease with carriers).
10. Battle model (basic battle model, jungle warfare, long range weapons).
11. Plotting of recursive sequences.
12. Study the convergence of sequences through plotting.
13. Verify Bolzano-Weierstrass theorem through plotting of sequences and hence identify convergent subsequences from the plot.
14. Study the convergence/divergence of infinite series by plotting their sequences of partial

15 Lectures (2 questions)

**Books Recommended**

1. Tyn Myint-U and Lokenath Debnath, *Linear Partial Differential Equations for Scientists and Engineers*, 4th edition, Springer, Indian reprint, 2006.
2. S.L. Ross, *Differential equations*, 3rd Ed., John Wiley and Sons, India, 2004.
3. Martha L. Abell, James P. Braselton, *Differential equations with MATHEMATICA*, 3rd Ed., Elsevier Academic Press, 2004.

**SEMESTER-IV**

**L SKILL ENHANCEMENT COURSE (SEC 2):**

(Credits: Theory-02)

Full Marks: 10 (MSE: ½ Hrs) + 40 (ESE: 1½ Hrs) = 50

Pass Marks: (MSE: 4) + (ESE: 16) = 20

**SCIENCE & LIFE**

A Common Syllabus Prescribed by BBMKU, Dhanbad

Theory: 30 Lectures

**Instruction to Question Setter for**

**End Semester Examination (ESE):** There will be **objective type test** consisting of hundred questions of 1 mark each. Students are required to mark their answer on **OMR Sheet** provided by the University.

MATHS-C-408-T	NUMERICAL METHODS	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-C-409-T	RIEMANN INTEGRATION AND SERIES OF FUNCTIONS	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-C-410-T	RING THEORY AND LINEAR ALGEBRA I	(06 Credits, 60 Lectures & 15 tutorial)

**CORE COURSE - C 8:**

(Credits: Theory-05, Tutorial-01)

Marks: 20 (MSE: 1Hr) ÷ 80 (ESE: 3Hrs) = 100	Pass Marks (MSE: 8 + ESE: 32) = 40
---	------------------------------------

**Instruction to Question Setter for:****Mid Semester Examination (MSE):**

There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**NUMERICAL METHODS:****UNIT I**

Algorithms, Convergence, Errors: Relative, Absolute, Round off, Truncation.

8 Lectures (1 question)

Transcendental and Polynomial equations: Bisection method, Newton's method, Secant method. Rate of convergence of these methods.

8 Lectures (1 question)

**UNIT II**

System of linear algebraic equations: Gaussian Elimination and Gauss Jordan methods. Gauss Jacobi method, Gauss Seidel method and their convergence analysis.

8 Lectures (1 question)

Interpolation: Lagrange and Newton's methods. Error bounds. Finite difference operators. Newton's Gregory forward and backward difference interpolation.

16 Lectures (2 question)

**UNIT III**

Numerical differentiation, Numerical Integration: Trapezoidal rule, Simpson's rule, Simpsons 3/8th rule, Boole's Rule. Midpoint rule, Composite Trapezoidal rule, Composite Simpson's rule.

14 Lectures (2 question)  
 Ordinary Differential Equations: Euler's method. Runge-Kutta methods of orders two and four.  
 6 Lectures (1 question)

**List of Practical (Using any software) for skill development**

1. Calculate the sum  $1/1 + 1/2 + 1/3 + 1/4 + \dots + 1/N$ .
2. To find the absolute value of an integer.
3. Enter 100 integers into an array and sort them in an ascending order.
4. Bisection Method
5. Newton Raphson Method.
6. Secant Method.
7. Regulai Falsi Method.
8. LU decomposition Method.
9. Gauss-Jacobi Method.
10. SOR Method or Gauss-Siedel Method.
11. Lagrange Interpolation or Newton Interpolation.
12. Simpson's rule.

**Books Recommended**

1. Brian Bradie, *A Friendly Introduction to Numerical Analysis*, Pearson Education, India, 2007.
2. M.K. Jain, S.R.K. Iyengar and R.K. Jain, *Numerical Methods for Scientific and Engineering Computation*, 6th Ed., New age International Publisher, India, 2007.

5. John H. Mathews and Kurtis D. Fink, *Numerical Methods using Matlab*, 4th Ed., PHI Learning Private Limited, 2012.

**CORE COURSE - C 9:**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100      Pass Marks (MSE: 8 + ESE: 32) = 40

***Instruction to Question Setter for:***

**Mid Semester Examination (MSE):**

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.*

**End Semester Examination (ESE):**

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will*

contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.

Note: There may be subdivisions in each question asked in End Semester Examinations.

## RIEMANN INTEGRATION AND SERIES OF FUNCTIONS:

### UNIT I

Riemann integration; inequalities of upper and lower sums; Riemann conditions of integrability.  
8 Lectures (1 question)

Riemann sum and definition of Riemann integral through Riemann sums; equivalence of two definitions; Riemann integrability of monotone and continuous functions, Properties of the Riemann integral; definition and integrability of piecewise continuous and monotone functions. Intermediate Value theorem for Integrals; Fundamental theorems of Calculus.

14 Lectures (2 question)

### UNIT II

Improper integrals and their convergence, Convergence of Beta and Gamma functions.

8 Lectures (1 question)

Point wise and uniform convergence of sequence of functions. Theorems on continuity, derivability and integrability of the limit function of a sequence of functions. Series of functions; Theorems on the continuity and derivability of the sum function of a series of functions; Cauchy criterion for uniform convergence and Weierstrass M-Test.

15 Lectures (2 question)

### UNIT III

Limit superior and Limit inferior. Power series, radius of convergence, Cauchy Hadamard Theorem, Differentiation and integration of power series; Abel's Theorem; Weierstrass Approximation Theorem.

15 Lectures (2 question)

### Books Recommended:

1. K.A. Ross, *Elementary Analysis. The Theory of Calculus*, Undergraduate Texts in Mathematics, Springer (SIE), Indian reprint, 2004.
2. R.G. Bartle D.R. Sherbert, *Introduction to Real Analysis*, 3rd Ed., John Wiley and Sons (Asia) Pvt. Ltd., Singapore, 2002.
3. Charles G. Denlinger, *Elements of Real Analysis*, Jones & Bartlett (Student Edition), 2011.

### CORE COURSE - C 10:

(Credits: Theory-05, Tutorial-01)

Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100      Pass Marks (MSE: 8 + ESE: 32) = 40

*Instruction to Question Setter for:*

#### Mid Semester Examination (MSE):

There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.

#### End Semester Examination (ESE):

There will be two group of questions. **Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.**

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

## **RING THEORY AND LINEAR ALGEBRA I:**

### **UNIT I**

Definition and examples of rings, properties of rings, subrings, integral domains and fields, characteristic of a ring. Ideal, ideal generated by a subset of a ring, factor rings, operations on ideals, prime and maximal ideals.

20 Lectures (3 question)

### **UNIT II**

Ring homomorphisms, properties of ring homomorphisms, Isomorphism theorems I, II and III, field of quotients.

10 Lectures (1 question)

Vector spaces, subspaces, algebra of subspaces, quotient spaces, linear combination of vectors, linear span, linear independence, basis and dimension, dimension of subspaces, theorems.

15 Lectures (2 question)

### **UNIT III**

Linear transformations, null space, range, rank and nullity of a linear transformation, matrix representation of a linear transformation, algebra of linear transformations. Isomorphisms, Isomorphism theorems, invertibility and isomorphisms, change of coordinate matrix.

15 Lectures (2 question)

### **Books Recommended**

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**MULTIVARIATE CALCULUS:****UNIT I**

Functions of several variables, limit and continuity of functions of two variables Partial

differentiation, total differentiability and differentiability, sufficient condition for differentiability. Chain rule for one and two independent parameters, directional derivatives, Extrema of functions of two variables, method of Lagrange multipliers,

15 Lectures (2 question)

### UNIT II

Double integration over rectangular region, double integration over non-rectangular region, Double integrals in polar co-ordinates, Triple integrals, Triple integral over a parallelepiped and solid regions. Volume by triple integrals, cylindrical and spherical co-ordinates. Change of variables in double integrals and triple integrals.

20 Lectures (3 question)

### UNIT III

The gradient, maximal and normal property of the gradient, tangent planes Definition of vector field, divergence and curl Line integrals, Applications of line integrals: Mass and Work. Fundamental theorem for line integrals, conservative vector fields, independence of path, Green's theorem, surface integrals, integrals over parametrically defined surfaces. Stoke's theorem.

25 Lectures (3 question)

#### Books Recommended:

1. G.B. Thomas and R.L. Finney, *Calculus*, 9th Ed., Pearson Education, Delhi, 2005.

**Note:** There may be subdivisions in each question asked in End Semester Examinations.

**GROUP THEORY II****UNIT I**

Automorphism, inner automorphism, automorphism groups, automorphism groups of finite and infinite cyclic groups, applications of factor groups to automorphism groups, Characteristic subgroups, Commutator subgroup and its properties

15 Lectures (2 question)

**UNIT II**

Properties of external direct products, the group of units modulo  $n$  as an external direct product, internal direct products, Fundamental Theorem of finite abelian groups.

15 Lectures (2 question)

**UNIT III**

Group actions, stabilizers and kernels, permutation representation associated with a given group action, Applications of group actions: Generalized Cayley's theorem, Index theorem.

15 Lectures (2 question)

**UNIT IV**

Groups acting on themselves by conjugation, class equation and consequences, conjugacy in  $S_n$ ,  $p$ -groups, Sylow's theorems and consequences, Cauchy's theorem, Simplicity of  $A_n$  for  $n \leq 5$ , non-simplicity tests.

15 Lectures (2 question)

**Books Recommended**

**Note:** There may be subdivisions in each question asked in End Semester Examinations.

## LINEAR PROGRAMMING

### UNIT I

Introduction to linear programming problem, convex sets and their properties, Theory of simplex method, optimality and unboundedness, the simplex algorithm, simplex method in tableau format, introduction to artificial variables, two - phase method, Big - M method and their comparison. 20 Lectures (3 question)

### UNIT II

Duality, formulation of the dual problem, primal - dual relationships, economic interpretation of the dual. 10 Lectures (1 question)

Transportation problem and its mathematical formulation, northwest - corner method least cost method and Vogel approximation method for determination of starting basic solution, algorithm for solving transportation problem, assignment problem and its mathematical formulation, Hungarian method for solving assignment problem. 15 Lectures (2 question)

### UNIT III

Game theory: formulation of two person zero sum games, solving two person zero sum games, games with mixed strategies, graphical solution procedure, linear programming solution of games. 15 Lectures (2 question)

### Books Recommended

1. Mokhtar S. Bazaraa, John J. Jarvis and Hanif D. Sherali, *Linear Programming and Network Flows*, 2nd Ed., John Wiley and Sons, India, 2004.
2. F.S. Hillier and G.J. Lieberman, *Introduction to Operations Research*, 9th Ed., Tata McGraw Hill, Singapore, 2009.
3. Hamdy A. Taha, *Operations Research, An Introduction*, 8th Ed., Prentice - Hall India, 2006.
4. G. Hadley, *Linear Programming*, Narosa Publishing House, New Delhi, 2002.

### DSE 1(B):

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100	Pass Marks (MSE: 8 + ESE: 32) = 40
--	------------------------------------

**Instruction to Question Setter for:**

### Mid Semester Examination (MSE):

There will be two group of questions. **Group A is compulsory** and will contain five questions of **very short answer type** consisting of 1 mark each. **Group B will contain descriptive type** five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory** and will contain two questions. **Question No.1** will be very short answer type consisting of eight questions of 1 mark each. **Question No.2** will be short answer type consisting two question of 4 marks. **Group B** will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**NUMBER THEORY****UNIT I**

Linear Diophantine equation, prime counting function, statement of prime number theorem, Goldbach conjecture, linear congruences, complete set of residues, Chinese Remainder theorem, Fermat's Little theorem, Wilson's theorem.

20 Lectures (3 question)

**UNIT II**

Number theoretic functions, sum and number of divisors, totally multiplicative functions, definition and properties of the Dirichlet product, the Mobius Inversion formula, the greatest integer function, Euler's phi - function, Euler's theorem, reduced set of residues, some properties of Euler's phi-function.

20 Lectures (3 question)

**UNIT III**

Order of an integer modulo  $n$ , primitive roots for primes, composite numbers having primitive roots, Euler's criterion, the Legendre symbol and its properties, quadratic reciprocity, quadratic congruences with composite moduli. Public key encryption, RSA encryption and decryption, the equation  $x^2 + y^2 = z^2$ , Fermat's Last theorem.

20 Lectures (2 question)

**Books Recommended**

1. David M. Burton, *Elementary Number Theory*, 6th Ed., Tata McGraw - Hill, Indian reprint, 2007.
2. Neville Robinns, *Beginning Number Theory*, 2nd Ed., Narosa Publishing House Pvt. Ltd., Delhi, 2007.

**DSE 1(C):**

**End Semester Examination (ESE):**

There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.

Note: There may be subdivisions in each question asked in End Semester Examinations.

**ANALYTICAL GEOMETRY:****UNIT I**

Techniques for sketching parabola, ellipse and hyperbola. Reflection properties of parabola, ellipse and hyperbola. Classification of quadratic equations representing lines, parabola, ellipse and hyperbola. 30 Lectures (4 question)

**UNIT II**

Spheres, cone, Cylindrical surfaces. Illustrations of graphing standard quadric surfaces like cone, ellipsoid. 30 Lectures (4 question)

**Books Recommended**

1. G.B. Thomas and R.L. Finney, *Calculus*, 9th Ed., Pearson Education, Delhi, 2005.
2. H. Anton, I. Bivens and S. Davis, *Calculus*, John Wiley and Sons (Asia) Pvt. Ltd. 2002.
3. S.L. Loney, *The Elements of Coordinate Geometry*, McMillan and Company, London.
4. R.J.T. Bill, *Elementary Treatise on Coordinate Geometry of Three Dimensions*, McMillan India Ltd., 1994.

**DSE 2(A):**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100      Pass Marks (MSE: 8 + ESE: 32) = 40

*Instruction to Question Setter for:*

**Mid Semester Examination (MSE):**

There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.

Note: There may be subdivisions in each question asked in End Semester Examinations.

**INDUSTRIAL MATHEMATICS****UNIT I**

Medical Imaging and Inverse Problems. The content is based on Mathematics of X-ray and CT scan based on the knowledge of calculus, elementary differential equations, complex numbers and matrices. 8 Lectures (1 question)

Introduction to Inverse problems: Why should we teach Inverse Problems? Illustration of Inverse problems through problems taught in Pre-Calculus, Calculus, Matrices and differential equations. Geological anomalies in Earth's interior from measurements at its surface (Inverse problems for Natural disaster) and Tomography. 16 Lectures (2 question)

**UNIT II**

X-ray: Introduction, X-ray behavior and Beers Law (The fundament question of image construction) Lines in the place. 8 Lectures (1 question)

Radon Transform: Definition and Examples, Linearity, Phantom (Shepp - Logan Phantom - Mathematical phantoms). 8 Lectures (1 question)

Back Projection: Definition, properties and examples. 5 Lectures (1 question)

**UNIT III**

CT Scan: Revision of properties of Fourier and inverse Fourier transforms and applications of their properties in image reconstruction. Algorithms of CT scan machine. Algebraic reconstruction techniques abbreviated as ART with application to CT scan. 15 Lectures (2 question)

**Books Recommended**

1. Timothy G. Feeman, *The Mathematics of Medical Imaging, A Beginners Guide*, Springer Under graduate Text in Mathematics and Technology, Springer, 2010.
2. C.W. Groetsch, *Inverse Problems, Activities for Undergraduates*, The Mathematical Association of America, 1999.
3. Andreas Kirsch, *An Introduction to the Mathematical Theory of Inverse Problems*, 2nd Ed., Springer, 2011.

**DSE 2(B):**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100

Pass Marks (MSE: 8 + ESE: 32) = 40

***Instruction to Question Setter for:*****Mid Semester Examination (MSE):**

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.*

**End Semester Examination (ESE):**

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will*

*contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

## **BOOLEAN ALGEBRA AND AUTOMATA THEORY**

### **UNIT I**

Definition, examples and basic properties of ordered sets, maps between ordered sets, duality principle, lattices as ordered sets, lattices as algebraic structures, sublattices, products and homomorphisms, Definition, examples and properties of modular and distributive lattices,

24 Lectures (3 question)

### **UNIT II**

Boolean algebras, Boolean polynomials, minimal forms of Boolean polynomials Quinn - McCluskey method, Karnaugh diagrams, switching circuits and applications of switching circuits.

16 Lectures (2 question)

### **UNIT III**

Introduction: Alphabets, strings, and languages. Finite Automata and Regular Languages: deterministic and non-deterministic finite automata, regular expressions, regular languages and their relationship with finite automata, pumping lemma and closure properties of regular languages.

7 Lectures (1 question)

Context Free Grammars and Pushdown Automata: Context free grammars (CFG), parse trees, ambiguities in grammars and languages, pushdown automaton (PDA) and the language accepted by PDA, deterministic PDA, Non- deterministic PDA, properties of context free languages; normal forms, pumping lemma, closure properties, decision properties.

7 Lectures (1 question)

Turing Machines: Turing machine as a model of computation, programming with a Turing machine, variants of Turing machine and their equivalence.

6 Lectures (1 question)

### **Books Recommended**

1. B A. Davey and H. A. Priestley, *Introduction to Lattices and Order*, Cambridge University Press, Cambridge, 1990.
2. Edgar G. Goodaire and Michael M. Parmenter, *Discrete Mathematics with Graph Theory*, (2nd Ed.), Pearson Education (Singapore) P.Ltd., Indian Reprint 2003.
3. Rudolf Lidl and Günter Pilz, *Applied Abstract Algebra*, 2nd Ed., Undergraduate Texts in Mathematics, Springer (SIE), Indian reprint, 2004.
4. J. E. Hopcroft, R. Motwani and J. D. Ullman, *Introduction to Automata Theory, Languages, and Computation*, 2nd Ed., Addison-Wesley, 2001.
5. H.R. Lewis, C.H. Papadimitriou, C. Papadimitriou, *Elements of the Theory of Computation*, 2nd Ed., Prentice-Hall, NJ, 1997.
6. J.A. Anderson, *Automata Theory with Modern Applications*, Cambridge University Press 2006

**DSE 2(C):**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100

Pass Marks (MSE: 8 + ESE: 32) = 40

***Instruction to Question Setter for:*****Mid Semester Examination (MSE):**

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.*

**End Semester Examination (ESE):**

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**PROBABILITY AND STATISTICS****UNIT I**

Sample space, probability axioms, real random variables (discrete and continuous), cumulative distribution function, probability mass/density functions, mathematical expectation, moments, moment generating function, characteristic function, discrete distributions: uniform, binomial, Poisson, geometric, negative binomial, continuous distributions: uniform, normal, exponential.

23 Lectures (3 question)

**UNIT II**

Joint cumulative distribution function and its properties, joint probability density functions, marginal and conditional distributions, expectation of function of two random variables, conditional expectations, independent random variables, bivariate normal distribution, correlation coefficient, joint moment generating function (jmgf) and calculation of covariance (from jmgf), linear regression for two variables.

23 Lectures (3 question)

**UNIT III**

Chebyshev's inequality, statement and interpretation of (weak) law of large numbers and strong law of large numbers, Central Limit theorem for independent and identically distributed random variables with finite variance.

14 Lectures (2 question)

**Books Recommended**

1. Robert V. Hogg, Joseph W. McKean and Allen T. Craig, *Introduction to Mathematical Statistics*, Pearson Education, Asia, 2007.
2. Irwin Miller and Marylees Miller, John E. Freund, *Mathematical Statistics with Applications*, 7th Ed., Pearson Education, Asia, 2006.
3. Sheldon Ross, *Introduction to Probability Models*, 9th Ed., Academic Press, Indian Reprint, 2007.

4. Alexander M. Mood, Franklin A. Graybill and Duane C. Boes, *Introduction to the Theory of Statistics*, 3rd Ed., Tata McGraw- Hill, Reprint 2007

### SEMESTER-VI

MATHS-C-613-T	METRIC SPACES AND COMPLEX ANALYSIS	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-C-614-T	RING THEORY AND LINEAR ALGEBRA II	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-H- DSE-603A-T	THEORY OF EQUATIONS	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-H- DSE-603B-T	BIO-MATHEMATICS	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-H- DSE-603C-T	PORTFOLIO OPTIMIZATION	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-H- DSE-604A-T	MATHEMATICAL MODELING	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-H- DSE-604B-T	MECHANICS	(06 Credits, 60 Lectures & 15 tutorial)
MATHS-H- DSE-604C-T	DIFFERENTIAL GEOMETRY	(06 Credits, 60 Lectures & 15 tutorial)

#### CORE COURSE 13:

(Credits: Theory-05,

Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100

Pass Marks (MSE: 8 + ESE: 32) = 40

Tutorial-01)

***Instruction to Question Setter for:***

**Mid Semester Examination (MSE):**

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

## **METRIC SPACES AND COMPLEX ANALYSIS:**

### **UNIT I**

Metric spaces: definition and examples. Sequences in metric spaces, Cauchy sequences. Complete Metric Spaces. Open and closed balls, neighbourhood, open set, interior of a set. Limit point of a set, closed set, diameter of a set, Cantor's theorem. Subspaces, dense sets, separable spaces.

15 Lectures (2 question)

### **UNIT II**

Continuous mappings, sequential criterion and other characterizations of continuity. Uniform continuity. Homeomorphism, Contraction mappings, Banach Fixed point Theorem.

15 Lectures (2 question)

### **UNIT III**

Limits, Limits involving the point at infinity, continuity. Properties of complex numbers, regions in the complex plane, functions of complex variable, mappings. Derivatives, differentiation formulas, Cauchy-Riemann equations, sufficient conditions for differentiability.

15 Lectures (2 question)

### **UNIT IV**

Analytic functions, examples of analytic functions, exponential function, Logarithmic function, trigonometric function, derivatives of functions, bilinear transformation, cross ratio, conformal mapping.

15 Lectures (2 question)

### **Books Recommended**

1. Satish Shirali and Harikishan L. Vasudeva, *Metric Spaces*, Springer Verlag, London, 2006.
2. S. Kumaresan, *Topology of Metric Spaces*, 2nd Ed., Narosa Publishing House, 2011.
3. G.F. Simmons, *Introduction to Topology and Modern Analysis*, McGraw-Hill, 2004.
4. James Ward Brown and Ruel V. Churchill, *Complex Variables and Applications*, 8th Ed., McGraw – Hill International Edition, 2009.
5. Joseph Bak and Donald J. Newman, *Complex Analysis*, 2nd Ed., Undergraduate Texts in Mathematics, Springer-Verlag New York, Inc., New York, 1997.

### **CORE COURSE – 14:**

(Credits: Theory-05,

Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100

Pass Marks (MSE: 8 + ESE: 32) = 40

Tutorial-01)

*Instruction to Question Setter for:*

**Mid Semester Examination (MSE):**

There will be two group of questions. **Group A is compulsory** and will contain five questions of very short answer type consisting of 1 mark each. **Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.**

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory** and will contain two questions. **Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.**

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**RING THEORY AND LINEAR ALGEBRA II:**

**UNIT I**

Polynomial rings over commutative rings, division algorithm and consequences, principal ideal domains, factorization of polynomials, reducibility tests, irreducibility tests, Eisenstein criterion, unique factorization in  $Z[x]$ . Divisibility in integral domains, irreducibles, primes, unique factorization domains, Euclidean domains. 22 Lectures (3 question)

**UNIT II**

Dual spaces, dual basis, double dual, transpose of a linear transformation and its matrix in the dual basis, annihilators, Eigen spaces of a linear operator, diagonalizability, invariant subspaces and Cayley-Hamilton theorem, the minimal polynomial for a linear operator.

15 Lectures (2 question)

**UNIT III**

Inner product spaces and norms, Gram-Schmidt orthogonalisation process, orthogonal complements, Bessel's inequality, the adjoint of a linear operator, minimal solutions to systems of linear equations, Normal and self-adjoint operators, Orthogonal projections and Spectral theorem. 23 Lectures (3 question)

**Books Recommended**

1. John B. Fraleigh, *A First Course in Abstract Algebra*, 7th Ed., Pearson, 2002.
2. M. Artin, *Abstract Algebra*, 2nd Ed., Pearson, 2011.
3. Joseph A. Gallian, *Contemporary Abstract Algebra*, 4th Ed., Narosa Publishing House, 1999.
4. Stephen H. Friedberg, Arnold J. Insel, Lawrence E. Spence, *Linear Algebra*, 4th Ed., Prentice-Hall of India Pvt. Ltd., New Delhi, 2004.
5. S. Lang, *Introduction to Linear Algebra*, 2nd Ed., Springer, 2005.
6. Gilbert Strang, *Linear Algebra and its Applications*, Thomson, 2007.
5. S. Kumaresan, *Linear Algebra- A Geometric Approach*, Prentice Hall of India, 1999.
6. Kenneth Hoffman, Ray Alden Kunze, *Linear Algebra*, 2nd Ed., Prentice-Hall of India Pvt. Ltd., 1971.
7. S.H. Friedberg, A.L. Insel and L.E. Spence, *Linear Algebra*, Prentice Hall of India Pvt. Ltd., 2004.

**DSE 3(A);**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100

Pass Marks (MSE: 8 + ESE: 32) = 40

***Instruction to Question Setter for:*****Mid Semester Examination (MSE):**

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type five questions of five marks each, out of which any three are to answer.*

**End Semester Examination (ESE):**

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**THEORY OF EQUATIONS:****UNIT I**

General properties of polynomials, Graphical representation of a polynomial, maximum and minimum values of a polynomials, General properties of equations, Descarte's rule of signs positive and negative rule, Relation between the roots and the coefficients of equations.

15 Lectures (2 question)

**UNIT II**

Symmetric functions, Applications of symmetric function of the roots, Transformation of equations. Solutions of reciprocal and binomial equations. Algebraic solutions of the cubic and biquadratic. Properties of the derived functions.

15 Lectures (2 question)

**UNIT III**

Symmetric functions of the roots, Newton's theorem on the sums of powers of roots, homogeneous products, limits of the roots of equations.

15 Lectures (2 question)

**UNIT IV**

Separation of the roots of equations, Strums theorem, Applications of Strum's theorem, Conditions for reality of the roots of an equation and biquadratic. Solution of numerical equations.

15 Lectures (2 question)

**Books Recommended**

1. W.S. Burnside and A.W. Panton, *The Theory of Equations*, Dublin University Press, 1954.
2. C. C. MacDuffee, *Theory of Equations*, John Wiley & Sons Inc., 1954.

**DSE 3(B);**

(Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100

Pass Marks (MSE: 8 + ESE: 32) = 40

**Instruction to Question Setter for:****Mid Semester Examination (MSE):**

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.**

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**BIO-MATHEMATICS:****UNIT I**

Mathematical Biology and the modeling process: an overview. Continuous models: Malthus model, logistic growth, Allee effect, Gompertz growth, Michaelis-Menten Kinetics, Holling type growth, Bacterial growth in a Chemostat, Harvesting a single natural population, Prey predator systems and Lotka Volterra equations, Populations in competitions, Epidemic Models (SI, SIR, SIRS, SIC), 15 Lectures (2 question)

**UNIT II**

Activator-Inhibitor system, Insect Outbreak Model: Spruce Budworm, Numerical solution of the models and its graphical representation. Qualitative analysis of continuous models: Steady state solutions, stability and linearization, multiple species communities and Routh-Hurwitz Criteria, Phase plane methods and qualitative solutions, bifurcations and limit cycles with examples in the context of biological scenario. 15 Lectures (2 question)

Spatial Models: One species model with diffusion, Two species model with diffusion, Conditions for diffusive instability, Spreading colonies of microorganisms, Blood flow in circulatory system, Travelling wave solutions, Spread of genes in a population. 7 Lectures (1 question)

**UNIT III**

Discrete Models: Overview of difference equations, steady state solution and linear stability analysis, Introduction to Discrete Models, Linear Models, Growth models, Decay models, Drug Delivery Problem, Discrete Prey-Predator models, Density dependent growth models with harvesting, Host-Parasitoid systems (Nicholson-Bailey model), Numerical solution of the models and its graphical representation. Case Studies: Optimal Exploitation models, Models in Genetics, Stage Structure Models, Age Structure Models. 23 Lectures (3 question)

**Books Recommended**

1. L.E. Keshet, *Mathematical Models in Biology*, SIAM, 1988.
2. J. D. Murray, *Mathematical Biology*, Springer, 1993.

3. Y.C. Fung, *Biomechanics*, Springer-Verlag, 1990.
4. F. Brauer, P.V.D. Driessche and J. Wu, *Mathematical Epidemiology*, Springer, 2008.
5. M. Kot, *Elements of Mathematical Ecology*, Cambridge University Press, 2001.

**End Semester Examination (ESE):**

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**PORTFOLIO OPTIMIZATION****UNIT I**

Financial markets. Investment objectives. Measures of return and risk. Types of risks. Risk free assets. Mutual funds. Portfolio of assets. Expected risk and return of portfolio. Diversification.

(2 questions)

**UNIT II**

Mean-variance portfolio optimization- the Markowitz model and the two-fund theorem, risk-free assets and one fund theorem, efficient frontier. Portfolios with short sales. Capital market theory.

(3 questions)

**UNIT III**

Capital assets pricing model- the capital market line, beta of an asset, beta of a portfolio, security market line. Index tracking optimization models. Portfolio performance evaluation measures.

(3 questions)

**Books Recommended**

1. F. K. Reilly, Keith C. Brown, *Investment Analysis and Portfolio Management*, 10th Ed., South-Western Publishers, 2011.
2. H.M. Markowitz, *Mean-Variance Analysis in Portfolio Choice and Capital Markets*, Blackwell, New York, 1987.
3. M.J. Best, *Portfolio Optimization*, Chapman and Hall, CRC Press, 2010.
4. D.G. Luenberger, *Investment Science*, 2nd Ed., Oxford University Press, 2013.

There will be two group of questions. **Group A is compulsory** and will contain five questions of **very short answer type** consisting of 1 mark each. **Group B will contain descriptive type** five questions of five marks each, out of which any three are to answer.

**End Semester Examination (ESE):**

There will be two group of questions. **Group A is compulsory** and will contain two questions. **Question No.1 will be very short answer type** consisting of eight questions of 1 mark each. **Question No.2 will be short answer type** consisting two question of 4 marks. **Group B will contain descriptive type** seven questions of sixteen marks each, out of which any four are to answer.

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**MECHANICS-II****UNIT I**

Analytical conditions of equilibrium of coplanar forces, virtual work, common catenary, forces in three dimension, Poinso't's central axis, wrenches. Null lines and planes, stable and unstable equilibrium

30 Lectures (4 question)

**UNIT II**

Velocities and acceleration along radial and transverse directions, along tangent and normal directions, simple harmonic motion, elastic string, Hook's law.

23 Lectures (3 question)

Central orbit, kepler's laws of motion.

7 Lectures (1 question)

**Books Recommended**

1. I.H. Shames and G. Krishna Mohan Rao, *Engineering Mechanics: Statics and Dynamics*, (4th Ed.), Dorling Kindersley (India) Pvt. Ltd. (Pearson Education), Delhi, 2009.
2. R.C. Hibbeler and Ashok Gupta, *Engineering Mechanics: Statics and Dynamics*, 11th Ed., Dorling Kindersley (India) Pvt. Ltd. (Pearson Education), Delhi.

**DSE 4(C):**

**End Semester Examination (ESE):**

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of eight questions of 1 mark each. Question No.2 will be short answer type consisting two question of 4 marks. Group B will contain descriptive type seven questions of sixteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in End Semester Examinations.*

**GRAPH THEORY**

Theory: 60 Lectures; Tutorial: 15 Lectures

**UNIT-1**

Definition, Examples and Basic Properties of Graphs, Pseudo graphs, Complete graphs, bipartite graph,

isomorphism of graphs, paths and circuits.

**UNIT-2**

Eulerian Circuits, Hamiltonian Cycles, Adjacency Matrix, Weighted Graph, Traveling Salesman's Problem, Shortest Path, Dijkstra's Algorithm.

**Books Recommended::**

- B.A. Davey and H.A. Priestley, Introduction to Lattices and Order, Cambridge University Press, Cambridge, 1990.
- Edgar G. Goodaire and Michael M. Parmenter, Discrete Mathematics, weighted graph, traveling salesman's problem, shortest path, Dijkstra's algorithm.

### LIST OF MATHEMATICS GENERIC ELECTIVE PAPERS

SEMESTER - 1	GE - 1.1 Object Oriented Programming in C++ GE - 1.2 Finite Element Methods GE - 1.3 Calculus (except mathematics hons.)	(06 Credits, 60 Lectures & 15 tutorial)
SEMESTER - 2	GE - 2.1 Mathematical Finance GE - 2.2 Econometrics GE - 2.3 Differential Equation (Except Maths Hons.)	(06 Credits, 60 Lectures & 15 tutorial)
SEMESTER - 3	GE - 3.1 Cryptography and Network Security GE - 3.2 Information Security GE - 3.3 Real analysis (Except Mathematics Hons.)	(06 Credits, 60 Lectures & 15 tutorial)
SEMESTER - 4	GE - 4.1 Applications of Algebra GE - 4.2 Combinatorial Mathematics GE - 4.3 Abstract Algebra (Except Mathematics Hons.)	(06 Credits, 60 Lectures & 15 tutorial)

**Note:-** In each of the 1<sup>st</sup> four semester there are three options for GE papers, among which only one to be opted

**I. GE - 1.1:** (Credits: Theory-05, Tutorial-01)

Full Marks: 20 (MSE: 1Hr) + 80 (ESE: 3Hrs) = 100      Pass Marks (MSE: 8 + ESE: 32) = 40

***Instruction to Question Setter for***

***Mid Semester Examination (MSE):***

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type six questions of five marks each, out of which any four are to answer.*

***End Semester Examination (ESE):***

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of ten questions of 1 mark each. Question No.2 will be short answer type of 5 marks. Group B will contain descriptive type six questions of fifteen marks each, out of which any four are to answer.*

***Note:*** There may be subdivisions in each question asked in Theory Examinations.

#### **Object Oriented Programming in C++**

##### **UNIT I**

OOP Paradigm: Comparison of Programming paradigms, Characteristics of Object-Oriented Programming Languages, Object-based programming languages C++: Brief History of C++, Structure of a C++ program, Difference between C and C++ - cin, cout, new, delete operators, ANSI/ISO Standard C++, Comments, Working with Variables and const Qualifiers. Enumeration, Arrays and Pointer.

23 Lectures (3 question)

**UNIT II**

Implementing oops concepts in C++ Objects, Classes, Encapsulation, Data Abstraction, Inheritance, Polymorphism, Dynamic Binding, Message Passing, Default Parameter Value, Using Reference variables with Functions.

15 Lectures (2 question)

**UNIT III**

Abstract data types, Class Component, Object & Class, Constructors Default and Copy Constructor, Assignment operator deep and shallow coping, Access modifiers – private, public and protected. Implementing Class Functions within Class declaration or outside the Class declaration. instantiation of objects, Scope resolution operator, Working with Friend Functions, Using Static Class members. Understanding Compile Time Polymorphism function overloading Rules of Operator Overloading (Unary and Binary) as member function/friend function, Implementation of operator overloading of Arithmetic Operators, Overloading Output/Input, Prefix/ Postfix Increment and decrement Operators, Overloading comparison operators, Assignment, subscript and function call Operator, concepts of namespaces.

22 Lectures (3 question)

**Books Recommended**

1. A. R. Venugopal, Rajkumar, and T. Ravishanker, *Mastering C++*, TMH, 1997.
2. S. B. Lippman and J. Lajoie, *C++ Primer*, 3rd Ed., Addison Wesley, 2000.
3. Bruce Eckel, *Thinking in C++*, 2nd Ed., President, Mindview Inc., Prentice Hall.
4. D. Parsons, *Object Oriented Programming with C++*, BPB Publication.
5. Bjarne Stroustrup, *The C++ Programming Language*, 3rd Ed., Addison Wesley.

**GE – 1.2:**

--	------------------------------------

***Instruction to Question Setter for******Mid Semester Examination (MSE):***

*There will be two group of questions. Group A is compulsory and will contain five questions of very short answer type consisting of 1 mark each. Group B will contain descriptive type six questions of five marks each, out of which any four are to answer.*

***End Semester Examination (ESE):***

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of ten questions of 1 mark each. Question No.2 will be short answer type of 5 marks. Group B will contain descriptive type six questions of fifteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in Theory Examinations.*

**Finite Element Methods****UNIT I**

Introduction to finite element methods, comparison with finite difference methods, Methods of weighted residuals, collocations, least squares. 7 Lectures (1 question)  
 Applications to solving simple problems of ordinary differential equations.  
 Linear, quadratic and higher order elements in one dimensional and assembly, solution of assembled system. 15 Lectures (2 question)

#### UNIT II

Simplex elements in two and three dimensions, quadratic triangular elements, rectangular elements, serendipity elements and isoperimetric elements and their assembly, discretization with curved boundaries 8 Lectures (1 question)  
 Interpolation functions, numerical integration. 15 Lectures (2 question)

#### UNIT III

Solution of one dimensional heat and wave equation and solution of two dimensional Laplace equation under different Geometric conditions. 15 Lectures (2 question)

#### Books Recommended

1. J.N. Reddy, *Introduction to the Finite Element Methods*, Tata McGraw-Hill, 2003.
2. K.J. Bathe, *Finite Element Procedures*, Prentice-Hall, 2001.
3. R.D. Cook, D.S. Malkus and M.E. Plesha, *Concepts and Applications of Finite Element Analysis*, John Wiley and Sons, 2002.
4. Thomas J.R. Hughes, *The Finite Element Method: Linear Static and Dynamic Finite Element Analysis*, Dover Publication, 2000.
5. George R. Buchanan, *Finite Element Analysis*, McGraw Hill, 1994.

#### GE - 1.3:

(Credits: Theory-05, Tutorial-01)

#### *Instruction to Question Setter for*

#### Mid Semester Examination (MSE):

There will be **two** group of questions. **Group A is compulsory** and will contain five questions of **very short answer type** consisting of 1 mark each. **Group B will contain descriptive type** six questions of five marks each, out of which any four are to answer.

#### End Semester Examination (ESE):

There will be **two** group of questions. **Group A is compulsory** and will contain two questions. **Question No.1 will be very short answer type** consisting of ten questions of 1 mark each. **Question No.2 will be short answer type** of 5 marks. **Group B will contain descriptive type** six questions of fifteen marks each, out of which any four are to answer.

**Note:** There may be subdivisions in each question asked in Theory Examinations.

#### CACULUS (Except Mathematics Hons. / Core):

#### UNIT I

Limit and Continuity ( $\epsilon$  and  $\delta$  definition), Types of discontinuities, Differentiability of functions, Successive differentiation, Leibnitz's theorem, Partial differentiation, Euler's theorem on homogeneous functions. 23 Lectures (3 question)

#### UNIT II

Tangents and normals, Curvature, Asymptotes, Singular points, Tracing of curves. Parametric representation of curves and tracing of parametric curves, Polar coordinates and tracing of curves in polar coordinates. 15 Lectures (2 question)

#### UNIT III

Reduction formulae, length of curves, volume and area of surface of revolution 15 Lectures (2 question)

Vector differentiation, curl, divergence and gradient. 7 Lectures (1 question)

#### Books Recommended

1. G.B. Thomas and R.L. Finney, *Calculus*, 9th Ed., Pearson Education, Delhi, 2005.
2. M.J. Strauss, G.L. Bradley and K. J. Smith, *Calculus*, 3rd Ed., Dorling Kindersley (India) P. Ltd. (Pearson Education), Delhi, 2007.

*There will be two group of questions. Group A is compulsory and will contain two questions. Question No.1 will be very short answer type consisting of ten questions of 1 mark each. Question No.2 will be short answer type of 5 marks. Group B will contain descriptive type six questions of fifteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in Theory Examinations.*

#### **Mathematical Finance:**

#### UNIT I

Basic principles: Comparison, arbitrage and risk aversion, Interest (simple and compound, discrete and continuous), time value of money, inflation, net present value, internal rate of return (calculation by bisection and Newton-Raphson methods), comparison of NPV and IRR. Bonds,

bond prices and yields, Macaulay and modified duration, term structure of interest rates: spot and forward rates, explanations of term structure, running present value, floating-rate bonds, immunization, convexity, puttable and callable bonds. 30 Lectures (4 question)

## UNIT II

Asset return, short selling, portfolio return, (brief introduction to expectation, variance, covariance and correlation), random returns, portfolio mean return and variance, diversification, portfolio diagram, feasible set, Markowitz model (review of Lagrange multipliers for 1 and 2 constraints), Two fund theorem, risk free assets, One fund theorem, capital market line, Sharpe index. Capital Asset Pricing Model (CAPM), betas of stocks and portfolios, security market line, use of CAPM in investment analysis and as a pricing formula, Jensen's index.

30 Lectures (4 question)

### Books Recommended

1. David G. Luenberger, *Investment Science*, Oxford University Press, Delhi, 1998.
2. John C. Hull, *Options, Futures and Other Derivatives*, 6th Ed., Prentice-Hall India, Indian reprint, 2006.
3. Sheldon Ross, *An Elementary Introduction to Mathematical Finance*, 2nd Ed., Cambridge University Press, USA, 2003.

### GE - 2.2:

(Credits: Theory-05, Tutorial-01)

Question No.2 will be short answer type of 5 marks. Group B will contain descriptive type six questions of fifteen marks each, out of which any four are to answer.*

*Note: There may be subdivisions in each question asked in Theory Examinations.*

### Econometrics:

#### UNIT I

Statistical Concepts Normal distribution; chi-square, t and F-distributions; estimation of parameters; properties of estimators; testing of hypotheses: defining statistical hypotheses; distributions of test statistics; testing hypotheses related to population parameters; Type I and Type II errors; power of a test; tests for comparing parameters from two samples.

23 Lectures (3 question)

**UNIT II**

Simple Linear Regression Model: Two Variable Case Estimation of model by method of ordinary least squares; properties of estimators; goodness of fit; tests of hypotheses; scaling and units of measurement; confidence intervals; Gauss-Markov theorem; forecasting.

22 Lectures (3 question)

**UNIT III**

Violations of Classical Assumptions: Consequences, Detection and Remedies Multicollinearity; heteroscedasticity; serial correlation.

7 Lectures (1 question)

Specification Analysis Omission of a relevant variable; inclusion of irrelevant variable; tests of specification errors.

8 Lectures (1 question)

**Books Recommended**

1. Jay L. Devore, *Probability and Statistics for Engineers*, Cengage Learning, 2010.
2. John E. Freund, *Mathematical Statistics*, Prentice Hall, 1992.
3. Richard J. Larsen and Morris L. Marx, *An Introduction to Mathematical Statistics and its Applications*, Prentice Hall, 2011.
4. D. N. Gujarati and D.C. Porter, *Essentials of Econometrics*, McGraw Hill, 4th Ed., International Edition, 2009.
5. Christopher Dougherty, *Introduction to Econometrics*, Oxford University Press, 3rd Ed., Indian edition, 2007.

**GE - 2.3:**

**Note:** There may be subdivisions in each question asked in Theory Examinations.

**DIFFERENTIAL EQUATIONS (Except Mathematics Hons.):****UNIT I**

First order exact differential equations. Integrating factors, rules to find an integrating factor. First order higher degree equations solvable for  $x$ ,  $y$ ,  $p$ . Methods for solving higher-order differential equations. Basic theory of linear differential equations, Wronskian, and its properties. Solving a differential equation by reducing its order.

15 Lectures (2 question)

#### UNIT II

Linear homogenous equations with constant coefficients, Linear non-homogenous equations, The method of variation of parameters, The Cauchy-Euler equation, Simultaneous differential equations, Total differential equations.

23 Lectures (3 question)

#### UNIT III

Order and degree of partial differential equations, Concept of linear and non-linear partial differential equations, Formation of first order partial differential equations, Linear partial differential equation of first order, Lagrange's method, Charpit's method.

22 Lectures (3 question)

#### Books Recommended

1. Shepley L. Ross, *Differential Equations*, 3rd Ed., John Wiley and Sons, 1984.
2. I. Sneddon, *Elements of Partial Differential Equations*, McGraw-Hill, International Edition, 1967.

*Note: There may be subdivisions in each question asked in Theory Examinations.*

#### Cryptography and Network Security:

##### UNIT I

Public Key Cryptography Principles & Applications, Algorithms: RSA, Message Authentication: One way Hash Functions: Message Digest, MD5, SHA1. Public Key Infrastructure: Digital Signatures, Digital Certificates, Certificate Authorities.

15 Lectures (2 question)

**UNIT II**

Network Attacks: Buffer Overflow, IP Spoofing, TCP Session Hijacking, Sequence Guessing, Network Scanning: ICMP, TCP sweeps, Basic Port Scans; Denial of Service Attacks: SYN Flood, Teardrop attacks, land, Smurf Attacks. IP security Architecture: Overview, Authentication header, Encapsulating Security Pay Load, combining Security Associations, Key Management. Virtual Private Network Technology: Tunneling using IPSEC. 23 Lectures (3 question)

**UNIT III**

Requirements, Secure Socket Layer, and Secure Electronic Transactions, Network Management Security: Overview of SNMP Architecture- SNMPV1, SNMPV3. Firewall Characteristics & Design Principles, Types of Firewalls: Packet Filtering Router, Application Level Gateway or Proxy, Content Filters, Bastion Host. 22 Lectures (3 question)

**Books Recommended**

1. W. Stallings, *Networks Security Essentials: Application & Standards*, Pearson Education, 2000.
2. TCP/IP Protocol Suite, Behrouz A. Forouzan, *Data Communication and Networking*, Tata McGraw Hill.
3. W. Stallings, *Cryptography and Network Security, Principles and Practice*, Pearson Education, 2000.

**GE - 3.2:**

(Credits: Theory-05, Tutorial-01)

*Note: There may be subdivisions in each question asked in Theory Examinations.*

**INFORMATION SECURITY:****UNIT I**

Overview of Security: Protection versus security; aspects of security-data integrity, data availability, privacy; security problems, user authentication, Orange Book.

7 Lectures (1 question)  
 Security Threats: Program threats, worms, viruses, Trojan horse, trap door, stack and buffer overflow; system threats- intruders; communication threats- tapping and piracy.

15 Lectures (2 question)

#### UNIT II

Cryptography: Substitution, transposition ciphers, symmetric-key algorithms-Data Encryption Standard, advanced encryption standards, public key encryption - RSA; Diffie-Hellman key exchange, ECC cryptography, Message Authentication- MAC, hash functions.

15 Lectures (2 question)

#### UNIT III

Digital signatures: Symmetric key signatures, public key signatures, message digests, public key infrastructures.

15 Lectures (2 question)

Security Mechanisms: Intrusion detection, auditing and logging, tripwire, system-call monitoring.

8 Lectures (1 question)

#### Books Recommended

1. W. Stallings, *Cryptography and Network Security Principles and Practices*, 4th Ed., Prentice-Hall of India, 2006.

*Note: There may be subdivisions in each question asked in Theory Examinations.*

## **REAL ANALYSIS (Except Mathematics Hons.)**

### **UNIT I**

Finite and infinite sets, examples of countable and uncountable sets. Real line, bounded sets, suprema and infima, completeness property of  $\mathbb{R}$ , Archimedean property of  $\mathbb{R}$ , intervals. Concept of cluster points and statement of Bolzano-Weierstrass theorem. 23 Lectures (3 question)

### **UNIT II**

Real Sequence, Bounded sequence, Cauchy convergence criterion for sequences. Cauchy's theorem on limits, order preservation and squeeze theorem, monotone sequences and their convergence (monotone convergence theorem without proof). 15 Lectures (2 question)

### **UNIT III**

Infinite series. Cauchy convergence criterion for series, positive term series, geometric series, comparison test, convergence of p-series, Root test, Ratio test, alternating series, Leibnitz's test (Tests of Convergence without proof). Definition and examples of absolute and conditional convergence. 22 Lectures (3 question)

### **Books Recommended**

1. T. M. Apostol, *Calculus* (Vol. I), John Wiley and Sons (Asia) P. Ltd., 2002.
2. R.G. Bartle and D. R. Sherbert, *Introduction to Real Analysis*, John Wiley and Sons (Asia) P. Ltd., 2000.
3. E. Fischer, *Intermediate Real Analysis*, Springer Verlag, 1983.
4. K.A. Ross, *Elementary Analysis- The Theory of Calculus Series-* Undergraduate Texts in Mathematics, Springer Verlag, 2003.

## APPLICATIONS OF ALGEBRA

### UNIT I

Balanced incomplete block designs (BIBD): definitions and results, incidence matrix of a BIBD, construction of BIBD from difference sets, construction of BIBD using quadratic residues, difference set families, construction of BIBD from finite fields. 15 Lectures (2 question)

### UNIT II

Coding Theory: introduction to error correcting codes, linear codes, generator and parity check matrices, minimum distance. 8 Lectures (1 question)

Symmetry groups and color patterns: review of permutation groups, groups of symmetry and action of a group on a set; colouring and colouring patterns. 7 Lectures (1 question)

### UNIT III

Special types of matrices: idempotent, nilpotent, involution, and projection tri diagonal matrices, circulant matrices, Vandermonde matrices, Hadamard matrices, permutation and doubly stochastic matrices, Frobenius- König theorem, Birkhoff theorem. Positive Semi-definite matrices: positive semi-definite matrices, square root of a positive semi-definite matrix, a pair of positive semi-definite matrices, and their simultaneous diagonalization. Symmetric matrices and quadratic forms: diagonalization of symmetric matrices, quadratic forms, constrained optimization, singular value decomposition, and applications to image processing and statistics. 15 Lectures (2 question)

### UNIT IV

Applications of linear transformations: Fibonacci numbers, incidence models, and differential equations. Least squares methods: Approximate solutions of system of linear equations, approximate inverse of an  $m \times n$  matrix, solving a matrix equation using its normal equation, finding functions that approximate data. Linear algorithms: LDU factorization, the row reduction algorithm and its inverse, backward and forward substitution, approximate inverse and projection algorithms. 15 Lectures (2 question)

### Books Recommended

**COMBINATORIAL MATHEMATICS****UNIT I**

Basic counting principles, Permutations and Combinations (with and without repetitions), Binomial theorem, Multinomial theorem, Counting subsets, Set-partitions, Stirling numbers.

7 Lectures (1 question)

Principle of Inclusion and Exclusion, Derangements, Inversion formulae

7 Lectures (1 question)

Generating functions: Algebra of formal power series, Generating function models, Calculating generating functions, Exponential generating functions.

8 Lectures (1 question)

**UNIT II**

Recurrence relations: Recurrence relation models, Solution of recurrence relations, Solutions by generating functions.

15 Lectures (2 question)

Integer partitions, Systems of distinct representatives, Polya theory of counting: Necklace problem and Burnside's lemma, Cyclic index of a permutation group, Polya's theorems and their immediate applications.

8 Lectures (1 question)

**UNIT III**

Latin squares, Hadamard matrices, Combinatorial designs:  $t$  designs, BIBDs, Symmetric designs.

15 Lectures (2 question)

**Books Recommended**

1. J.H. van Lint and R.M. Wilson, *A Course in Combinatorics*, 2nd Ed., Cambridge University Press, 2001.

*Note: There may be subdivisions in each question asked in Theory Examinations.*

**ABSTRACT ALGEBRA (Except Mathematics Hons.)**

**UNIT I**

Definition and examples of groups, examples of abelian and non-abelian groups, the group  $Z_n$  of integers under addition modulo  $n$  and the group  $U(n)$  of units under multiplication modulo  $n$ . Cyclic groups from number systems, complex roots of unity, circle group, the general linear group  $GL_n(n, R)$ .

15 Lectures (2 question)

**UNIT II**

Subgroups, cyclic subgroups, the concept of a subgroup generated by a subset and the commutator subgroup of group, examples of subgroups including the center of a group. Cosets, Index of subgroup, Lagrange's theorem, order of an element, Normal subgroups: their definition, examples, and characterizations, Quotient groups.

22 Lectures (3 question)

**UNIT III**

Definition and examples of rings, examples of commutative and non-commutative rings: rings from number systems,  $Z_n$  the ring of integers modulo  $n$ , ring of real quaternions, rings of matrices, polynomial rings, and rings of continuous functions. Subrings and ideals, Integral domains and fields, examples of fields:  $Z_p$ ,  $Q$ ,  $R$ , and  $C$ .

23 Lectures (3 question)

**Books Recommended**

1. John B. Fraleigh, *A First Course in Abstract Algebra*, 7th Ed., Pearson, 2002.

*Copyright Reserved*

**Binod Bihari Mahto Koyalanchal University, Dhanbad**  
**End-Semester Examination xxxx (Session: xxxx-xx)**

**Subject/Code:**

Full Marks: 80

Pass Marks: 32

Time:3Hours

**General Instructions:**

Candidates are required to give their answers in their own words as far as practicable.

The Questions are of equal value.

Answer any five questions of the following in which Q.1 is compulsory.

**Group A**

**1. (A) Multiple Choice Questions**

**(1x8=08)**

- (i) .....
- (ii) .....
- (iii) .....
- (iv) .....
- (v) .....
- (vi) .....
- (vii) .....
- (viii) .....

**(B) Short answer type questions**

**(4x2=08)**

- (a) .....
- (b) .....

**Group B**

**(Long answer type questions)**

Answer any four of the following.

**(16x4=64)**

- 2. ....
- 3. ....
- 4. ....
- 5. ....
- 6. ....
- 7. ....
- 8. ....
